

LAB LICENSE RENEWAL INSTRUCTIONS

Your renewal package contains...

- ▶ ExtendSim "Network" CD
- ▶ Site.tmp file – emailed to you or on the "License Customization" CD

License Information

Serial Number

License Administrator

Product Name & Code

IMPORTANT INFORMATION - before you begin

- You are receiving this package because you renewed the Maintenance and Support Subscription for your ExtendSim Lab License.
- With your original Lab License, ExtendSim files were installed on Client computers (typically) or on a Server (atypically). This allows a specified number of simultaneous users (students and instructors) to access the ExtendSim software in a network environment.
- To renew your Lab License:
 - You SHOULD NOT uninstall ExtendSim files from your computers nor re-register ExtendSim.
 - You DO need to renew the Lab License and possibly (as discussed in Step 2 below) update each installation of the ExtendSim application and files to the latest release.
- Client computers need Read/Write access to the ExtendSim7 directory during the renewal process.
- For more information about the ExtendSim Lab License, such as minimum requirements, see the Lab License Instructions. That document was provided with your original ExtendSim 7 Lab License; it is also available for download at www.extendsim.com/support_resourcecafe.html.

RENEWAL INSTRUCTIONS

Step 1 Renew the Lab License

- Typically this step must be done for each Client on the network. However, if you have a Server installation of the ExtendSim application and files, such that Client computers launch and use ExtendSim remotely over a network, follow these instructions only for the Server. (Note: installation on a Server is not typical.)
- The "site.tmp" file will remove the Maintenance Due message and update the Lab License with the new renewal date. This file may have been emailed to you, or it may be found on the License Customization CD.
- If ExtendSim is run directly on Client computers, copy the site.tmp file to the ExtendSim7 folder on each Client computer. If ExtendSim is instead used remotely over the network, copy the site.tmp file just to the ExtendSim7 folder on the Server. (In either case, do not copy the file into the Program Group window. You must copy the site.tmp file into the computer's ExtendSim7 folder.)

Step 2 Update ExtendSim

- Compare your ExtendSim release number to what is currently shipping. Your release number is located in the Help > About ExtendSim menu command. To determine what release number is currently shipping, go to www.extendsim.com. If there is a more current release than what is installed on your computers, do either of the following to obtain the newer files:
 - Download the update patch to each computer that has ExtendSim. To download the patch, either go to Help > Updates from within ExtendSim or go to www.extendsim.com/support_upgrades_ES7.html.
 - Or, if an ExtendSim Network CD was shipped to you with this renewal, insert the Network CD into each computer's hard drive and run the Installer.
- Whichever method you choose to obtain the most recent ExtendSim files, you need to install those files on the appropriate computers – either each Client computer or on the Server. During the installation process, you will also need to enter the serial number, product name, and product code located at the top of this page.

Step 3 Launch ExtendSim

- When ExtendSim is launched, the site.tmp file disappears and Lab License information is updated.
