ABOUT THE ASP LICENSE

An ASP license gives the licensee the right to access (or in the case of service providers, to provide access to) the full functionality of ExtendSim over an intranet or the internet utilizing a customized license of ExtendSim AT.

An ExtendSim ASP license is a great solution for organizations who:

- Want the benefits and capabilities of simulation without deploying ExtendSim licenses to end users
- Prefer centralized control and management of ExtendSim models
- Choose to access the functionality of ExtendSim via an intranet or the internet
- Have few or no end users with simulation modeling interest or expertise
- Prefer an Application Service Provider (ASP) or Software-as-a-Service (SaaS) approach to software licensing

The ExtendSim ASP license is typically used in combination with a front end interface (wrapper environment) developed either by the licensee organization or by a third party. The wrapper environment uses a COM interface to send data to ExtendSim, run a model, and retrieve results. It accesses the functionality of ExtendSim while presenting end users with a standardized front end, across multiple models, for data entry and the reporting of results. The combination of an ExtendSim ASP license with a wrapper environment has the advantages of remote access via the web, centralized feature updating, and lower learning curves for non-modelers.

IMPORTANT INFORMATION - before you begin

- The licensee is responsible for developing any wrapper environment or front end interface.
- The ASP license utilizes a customized version of ExtendSim AT.
- This license also includes the right to install the ASP license on one additional server for testing purposes only.
- ASP licenses are subject to an annual renewal fee of 20% of the original purchase price after the first year.

MINIMUM REQUIREMENTS

- 🖥️ XP, Vista, or Windows 7
- 🍏 OS X 10.4 to 10.7 and a browser to view the Help
- 300 MB hard disk space and 256 MB RAM (Vista 512 MB RAM), 2GB RAM recommended

INSTALLING THE ASP LICENSE
