

DISTRIBUTED ANALYSIS LICENSE INSTALLATION INSTRUCTIONS

Your Distributed Analysis license for ExtendSim package contains...

- ▶ ExtendSim CD
- ▶ Serial number

License Information

Serial Number

Date Sent

ABOUT THE DISTRIBUTED ANALYSIS LICENSE

A Distributed Analysis license is mainly used to boost the performance of your full version of ExtendSim by off-loading or distributing extensive model analysis runs to a separate computer. It is also useful in any situation where you want a front end application to communicate with ExtendSim "behind the scenes". The Distributed Analysis license is a cost-effective way to access advanced ExtendSim functionality, without having to purchase the full version of ExtendSim.

Use a Distributed Analysis license to run simulations on, and obtain results from, a computer other than your primary computer. Or use it as a back end application, running simulations and exporting results to a front end application such as Excel. Like the full version of ExtendSim, but as opposed to the ExtendSim LT license, the Distributed Analysis license allows you to remotely cause the model to run and send data back and forth between applications and even between computers.

A Distributed Analysis license is useful in cases where:

- 1 You have developed a model on your primary computer using a full version of ExtendSim.
- 2
 - The model requires extensive analysis, for instance, Optimization, which can have long run times. And you want to off-load that analysis to one or more secondary computers which will automatically send model results back to your primary computer... OR
 - You have developed a front end application that requires ExtendSim as the back end application and both applications run on the same computer... OR
 - You just want to be able to remotely, rather than directly, start models running on secondary computers.
- 3 You have programming capability, especially knowledge of ActiveX/COM for interfacing with ExtendSim.

IMPORTANT INFORMATION - before you begin

- This is a single-user license, for a person's own use on a single computer. An ExtendSim ASP license is required if you want to distribute ExtendSim functionality to multiple users.
- This license requires that you also have one full version of ExtendSim.
- ExtendSim has the hooks to allow it to be controlled as an Automation (ActiveX/COM) server. But you must know how to program an application that can use ActiveX/COM to control ExtendSim. This is usually done in a language such as Visual Basic, such that your custom application will cause ExtendSim models to run and send data remotely.
- Distributed Analysis licenses are available for Windows only.

MINIMUM REQUIREMENTS

- XP, Vista, or Windows 7
- 300 MB hard disk space and 256 MB RAM (Vista 512 MB RAM), 2GB RAM recommended

INSTALLING THE ASP LICENSE

- ExtendSim CD uses Window's AutoRun feature, so AutoRun should be enabled.
- Insert the ExtendSim CD into your hard drive
- On the ExtendSim splash screen, click "ExtendSim Install"
- Follow the Installer instructions choosing the ExtendSim AT product
- The ExtendSim Serial Number and Product Code are located above
