

SITE LICENSE INSTRUCTIONS

This Site License for ExtendSim contains the following:

- ▶ ExtendSim Network CD
- ▶ License Customization Files CD with a Site.tmp file (may have been emailed to you)
- ▶ Serial number and product code

Licensed Information

License Administrator

Serial Number

Product Name & Code

Version

Date Sent

IMPORTANT INFORMATION - before you begin installing

- ⊖ The ExtendSim Site License allows up to 200 students to simultaneously access the ExtendSim software in a network environment.
- ⊖ A single central server must be used as the License Server. The university is required to regulate the license and its school/campus-wide distribution. The Site License may be used by any student or professor anywhere at the Site as long as they have access to the server. These licenses may not be checked out from the server.
- ⊖ The course instructor is allowed to install and use one of the Site Licenses on his/her computer, even when that computer is outside of the site network.
- ⊖ The Site License is only to be used for instructional purposes or for research towards an advanced degree. It may NOT be used for commercial or consulting purposes or by those who are not current students or professors. Use over the internet is prohibited.
- ⊖ Site Licenses are subject to an annual renewal fee.

REQUIREMENTS

- Windows XP, Vista, 7, 2003 Server, or better.
- OS X 10.4 + and a browser to view the Help
- ⊖ 400 MB hard disk space and 512 MB RAM – 2 GB RAM recommended
- ⊖ To run ExtendSim Suite, a 3D hardware accelerator card with 64+ MB RAM is required

COPY PROTECTION

- ⊖ ExtendSim has built-in copy protection and can only be used with a valid site.tmp file. However, care should be taken to only install this license as authorized and to not distribute the site.tmp file to unauthorized users.
- ⊖ If installed correctly, this network license allows up to 200 users to access the program at one time.

ADDITIONAL NOTES

- ⊖ Network licenses are pre-registered to a License Administrator. Please contact Imagine That Inc. in the event of a change in the License Administrator.
- ⊖ If you have any questions about the above information, the installation procedures, or about ExtendSim, please contact Imagine That! technical support at support@extendsim.com.

Imagine That!

INSTALLATION INFORMATION

It is recommended that you install ExtendSim on individual computers within a local area network (LAN). (You may instead install ExtendSim on one server, such that individual computers launch and use ExtendSim remotely over a local area network (LAN). However, installation on a server is NOT recommended since performance is considerably degraded when ExtendSim is launched remotely from a server.)

INSTALLATION

Follow these instructions whether you install ExtendSim on individual computers or on a single server.

Windows

Step 1: Install the ExtendSim "Network" CD

- 1 Do the installation on each individual computer (or, atypically, on a Server).
- 2 Click the "ExtendSim Install" button on the splash screen.
WARNING: DO NOT click the "Server Install" button. It will never be used for the Academic Network installation process.
- 3 Follow the Installer's directions. When asked to enter a name, enter any name you want; we suggest entering the name of the License Administrator. Your ExtendSim serial number and product code are found on page 1.
- 4 When finished installing, do not register the license (it is pre-registered). Instead click "Finish Later".

Step 2: Install the site.tmp file (*required to finalize installation of your Academic Network license*)

- 1 The site.tmp file was either emailed to you or is located on the ExtendSim "License Customization Files" CD.
- 2 Copy the "site.tmp" file from the License Customization Files CD (or the email you received) to the ExtendSim 8 folder (on Windows XP place in \My Documents\ExtendSim8 folder; Vista users place in \Documents\ExtendSim8).
- 3 Launch ExtendSim to complete the customization. The site.tmp file disappears after you launch ExtendSim.
- 4 If you are installing on individual computers (recommended), repeat this process on each computer.

Macintosh

Step 1: Install the ExtendSim "Network" CD

- 1 Double-click the "ExtendSim8 Installer" icon.
- 2 Follow the Installer's directions, entering the ExtendSim serial number and product code in the appropriate screens. Enter any name you want; we suggest entering the name of the License Administrator.

Step 2: Install the site.tmp file (*required to finalize installation of your network license*)

- 1 The site.tmp file was either emailed to you or is located on the ExtendSim "License Customization" CD.
- 2 Copy the site.tmp file into the ExtendSim8 folder on your hard drive.
- 3 Launch ExtendSim to complete the customization. The site.tmp file will disappear after you launch ExtendSim.
- 4 If you are installing on individual computers (recommended), repeat this process on each computer.

UPDATING, RENEWING, AND UPGRADING

Updating from 8.x to 8.x+

When new non-major releases of ExtendSim occur, all computers should be updated. To update ExtendSim, download the update file from the ExtendSim web site at http://www.extendsim.com/support_upgrades.html.

Renewing your Maintenance Plan

When you renew your annual Maintenance, you will receive the separate "Academic Network Renewal Instructions".

Upgrading from ExtendSim 7 to ExtendSim 8

See the separate document "**Major Upgrade * Academic Network License" instructions.
