

*** MAJOR UPGRADE ***

ACADEMIC NETWORK LICENSE

License Information

Enclosed please find:

- "Network" CD for ExtendSim 8
- "License Customization Files" CD containing a new site.tmp file to activate your license
- Academic Network Instructions

UPGRADING TO THE EXTENDSIM 8 ACADEMIC NETWORK LICENSE

Because each Network License allows only a specified number of concurrent users, you are not allowed to have both Network Licenses (ExtendSim 7 and ExtendSim 8) installed for more than a short (3 month) transition period.

Thus you have two options when you install the ExtendSim 8 upgrade:

- 1 Uninstall the ExtendSim 7 files, then install the ExtendSim 8 files.
Do Step 1, then Step 2.
- 2 Run the ExtendSim 7 and ExtendSim 8 Network Licenses in parallel for up to 3 months.
Then uninstall ExtendSim 7. Do Step 2, then within 3 months do Step 1.

Step 1: Uninstalling ExtendSim 7

- 1 Back up your ExtendSim 7 files.
- 2 Remove the ExtendSim 7 license. Typically this step must be done for each computer on the network. However, if you have an ExtendSim installation on a server, such that other computers launch and use ExtendSim remotely over a network, follow these instructions only for the server. (Note: installation on a server is *not* typical and is *not* recommended.)

Windows

- Use Windows' Add/Remove Programs to uninstall ExtendSim 7 from each computer.
- Keep the ExtendSim 7 folder until you move your custom models and libraries.

Macintosh

- Save any custom files that you want to keep (models, custom libraries, or extensions).
- Then, discard the ExtendSim 7 folder from each computer.

Step 2: Installing ExtendSim 8

- 1 Follow the "Installation" instructions on Page 2 of the Academic Network Instructions.
- 2 Place any custom models and libraries from ExtendSim 7 into the appropriate folders in the ExtendSim 8 folders. (On Windows XP place in \My Documents\ExtendSim8 folder; Vista users place in \Documents\ExtendSim8.)

Note: When using ExtendSim on a computer which has both ExtendSim 7 and 8 installed, the last instance of ExtendSim installed is the default release that will open. If you wish ExtendSim 7 to be the default, use the File > Update Launch Control command. Or, go directly to the ExtendSim 7 folder and double-click the ExtendSim 7 application icon to open.
